

Corporate Environmental Policy

The basic five natural elements namely earth, water, energy, wind and air of the ecosystem have to be honoured and protected. We have to respect the biodiversity that is the degree of variation of life in the corporate environmental policy. This deviation can refer to genetic inequality, species contrast, or ecosystem dissimilarity within an area, biome or planet. The corporate environmental policy will wrap not only the preservation of environment at ILD but also will entail the appropriateness of commercial sense of business sustainability towards future generation related to business.

In order to support our goal, the policy is to be defined in terms of methodology, mode, specifics, and guidelines along with their basic principles and procedures.

- + Comply with or marginal exceptions of requirements keeping up the spirit of applicable environmental legislation and regulations.
- + Enrich the biodiversity of the nature surrounding our areas of business.
- + Optimize the use of natural resources in order to reduce pollution, minimize wastage and maximize reutilization/ recycling.
- + Attempt to replace the conventional source of energy by nonconventional, alternative and renewable sources of energy.

Methodology, mode, specifics and guidelines to achieve, shield and improve the environmental richness:

- + Standard augmentation of the environment sustainability performance of our end products such as energy efficient Florescent/ LED lighting and HVAC systems, adopting feasible renewable energy source, treatment of STP water and recycling of wastewater after purification in flushing/ gardening and horticulture by dip irrigation system and rainwater harvesting mechanism.
- + Deployment and creation of environment for our employees, suppliers and contractors to reduce risks from environmental, health or safety hazards for themselves and other in the vicinity of our operations. Training employees, associates and other stakeholders to promote environmental awareness and encouraging them to work in an environmentally safe and sound condition.
- + Communicating our commitment, responsibility and performance of the organization to our clients, customers and public to elevate awareness and encourage public participation.
- + Establishing organizational goal with process as improved, fixing quantifiable targets as appropriate, reviewing programs and processes for continuous compliance as augmented and beneficial.
- + Procurement of product, services that minimize the damage on environment on a lifecycle basis, encouraging the use of energy efficient raw materials containing the reusable wastes and disposing the excess waste through environmentally safe manner.
- + Enriching the biodiversity by maximizing the green landscape and horticultural activities in our real estate projects and encourage tree plantation.

We periodically update and redraft the Environmental Policy based on review, reassess and feedback response.
